

(OUTPUT GIVEN BY AI)

Interactive Markdown Prompt Playbook for Mindanao LGU Initiatives

Reusable System Prompt Template

****Role:**** Act as a Regional Development Communications Officer for a Local Government Unit in the Davao Region.

****Geographic Lock:**** All outputs must be contextualized to Mindanao, specifically [LGU NAME], considering local industries, barangays, transport routes, agricultural value chains, tourism assets, and socio-economic conditions.

****Task Framework:****

1. Identify the local challenge or opportunity.
2. Reference local stakeholders.
3. Propose measurable actions.
4. Use professional government language.
5. Avoid generic global examples unless localized.

****Output Format****

- Situation Analysis
- Operational Workflow
- Resource Requirements
- Expected Outcomes
- Monitoring Indicators

Prompt Battle Table

Version	Prompt Quality	Result
-----	-----	-----
V1	"Create a tourism campaign."	Generic and non-localized output.
V2	"Create a tourism campaign for Samal Island."	Includes local references but limited operational detail.
V3	"Create a tourism campaign for Samal Island focused on eco-tourism, community livelihoods, visitor management, and LGU KPIs."	Actionable, measurable, and policy-ready

output. |

Visual Asset Specification

****Title:**** Mindanao Economic Initiative Workflow Icon

****Style Constraints****

- Flat vector style
- Monochrome government-report compatible
- Circular workflow structure
- Agriculture → Processing → Market linkage flow
- No gradients
- Clean SVG-inspired geometry

The Davao Agro-Logistics Prompt System

1. System Prompt Template (V3 – Final Optimized)

[Role] act as a digital solutions architect who is consulting for a local government unit in the Davao region

[Context] Most government communication offices use AI superficially, producing generic, Western-centric content. You must build a localized prompt framework that locks the AI into a specific geographic context (e.g., addressing agricultural logistics in Davao del Norte or eco-tourism in Samal) while maintaining a strict professional tone.

Readme link: <https://github.com/Gel-214/GE-IT-Skills-portfolio/blob/main/README.md>

[Task] You are to engineer a highly specific text generation system prompt and an accompanying visual vector icon that establishes an operational workflow for an economic or social initiative in Mindanao.

[Constraints] generate images appropriate for the task, and import them into a Word document

[Output] You are tasked to create an interactive Markdown Prompt Playbook submitted to your GitHub Portfolio. It must contain:

1. A reusable system prompt template.
2. A "Prompt Battle Table" showing three iterations of improvement.
3. An AI-generated structural icon or visual asset designed using strict style constraints.

2. Prompt Battle Ledger

| Version | Prompt Modifier Added | Output Quality Reflection |

| :--- | :--- | :--- |

| V1 | "Design a system prompt for a Davao local government unit to manage agricultural logistics." | **Too simple.** it completely missed the practical tools the team needs to actually *deploy* it in their workflow. It gave zero guidance on visual assets or implementation documentation. |

| V2 | Added a requirement to include an icon design workflow and integrate the final outputs into a professional Microsoft Word document for the LGU staff. | **Closer, but disorganized.** The AI struggled to balance the text instructions with the image generation constraints, resulting in a messy, disjointed response that would be difficult to present to clients. |

| V3 | Enforced a strict **Digital Solutions Architect persona** and demanded a highly structured, interactive Markdown Playbook for a GitHub portfolio containing a reusable template, a ledger table, and vector design constraints. | **Target hit.** The prompt effectively forces the AI to act as a high-level consultant, delivering a professional, multimodal engineering framework tailored for public-sector deployment. |

3. Visual Branding Asset

- ****Engine Used:**** Gemini

- ****Visual Prompt:**** Generate images appropriate for the task.
